## Full-Serve Car Wash

### Definition:

Full-service car washing offers a robust number of profit opportunities yielding higher revenue per car. Greeted by a live attendant, the customer selects their wash level and extra services before exiting the vehicle to a retail waiting area or convenience store. While the customer is waiting, attendants take the vehicle through the wash, vacuum, clean windows, and perform other detailing services. Although popular with customers, it is labor intensive, and rising wages in some markets are leading full-service washes to increasingly use automated equipment normally used in express and flex-service operations to replace manual labor.

Every full-serve car wash represents different start-up parts, tools, and supply requirements, depending on the services offered. Sonny's offers convenient lists of the most popular items ordered with a new full-serve tunnel package. Want to customize it – give us a call or go online. With over 12,000 car wash items in stock for immediate delivery, chances are we'll have everything you need – priced right.
