Vacuum Components

Stationary Vacuum, 1 to 3 Users

Portable Vacuum, 1 to 2 Users

Cyclonic High Efficiency Separator

AVI Equipment Offers a Complete Line of Accessories:

Bondo Buster

Hose Kit with Air Chuck and Vacuum Cuff Sander

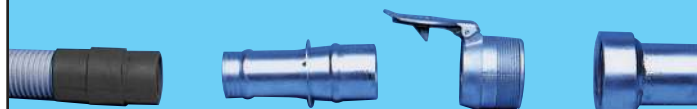

Orbital Sander

Tool Holder with Hose Loop

Vacuum Hose, Hose Adapter, Inlet Valve, Separator Inlet

Pulse Jet Separator, 1 to 6 Users

Elite Vac - the Central Vacuum Dust Extraction System Designed to Maintain an Efficient, Cleaner Body Shop

With the addition of an EliteVac Dust Extraction System, coupled to vacuum accessible sanders, grinders and finishing tools. **Your body shop will portray the quality of your service.**

Benefits

LESS MESS

When dust is collected at the source, rather than being spread through the air, it leads to a cleaner shop and that means...

LOWER COSTS

These dust collectors pay for themselves with all the money saved on:

- Sandpaper- When sanding dust is removed immediately, sandpaper lasts longer, reducing material costs by 30-40%
- Clean up - sweeping is ineffective and time consuming. Vacuuming dust at the source is virtually effortless.
- Re-Paints - Even with the best paint booths, dust from sanding often seems to find its way into fresh paint jobs. By collecting dust at the source, your shop drastically reduces the risk of paint repair and worse: Re-Painting

LESS LIABILITY

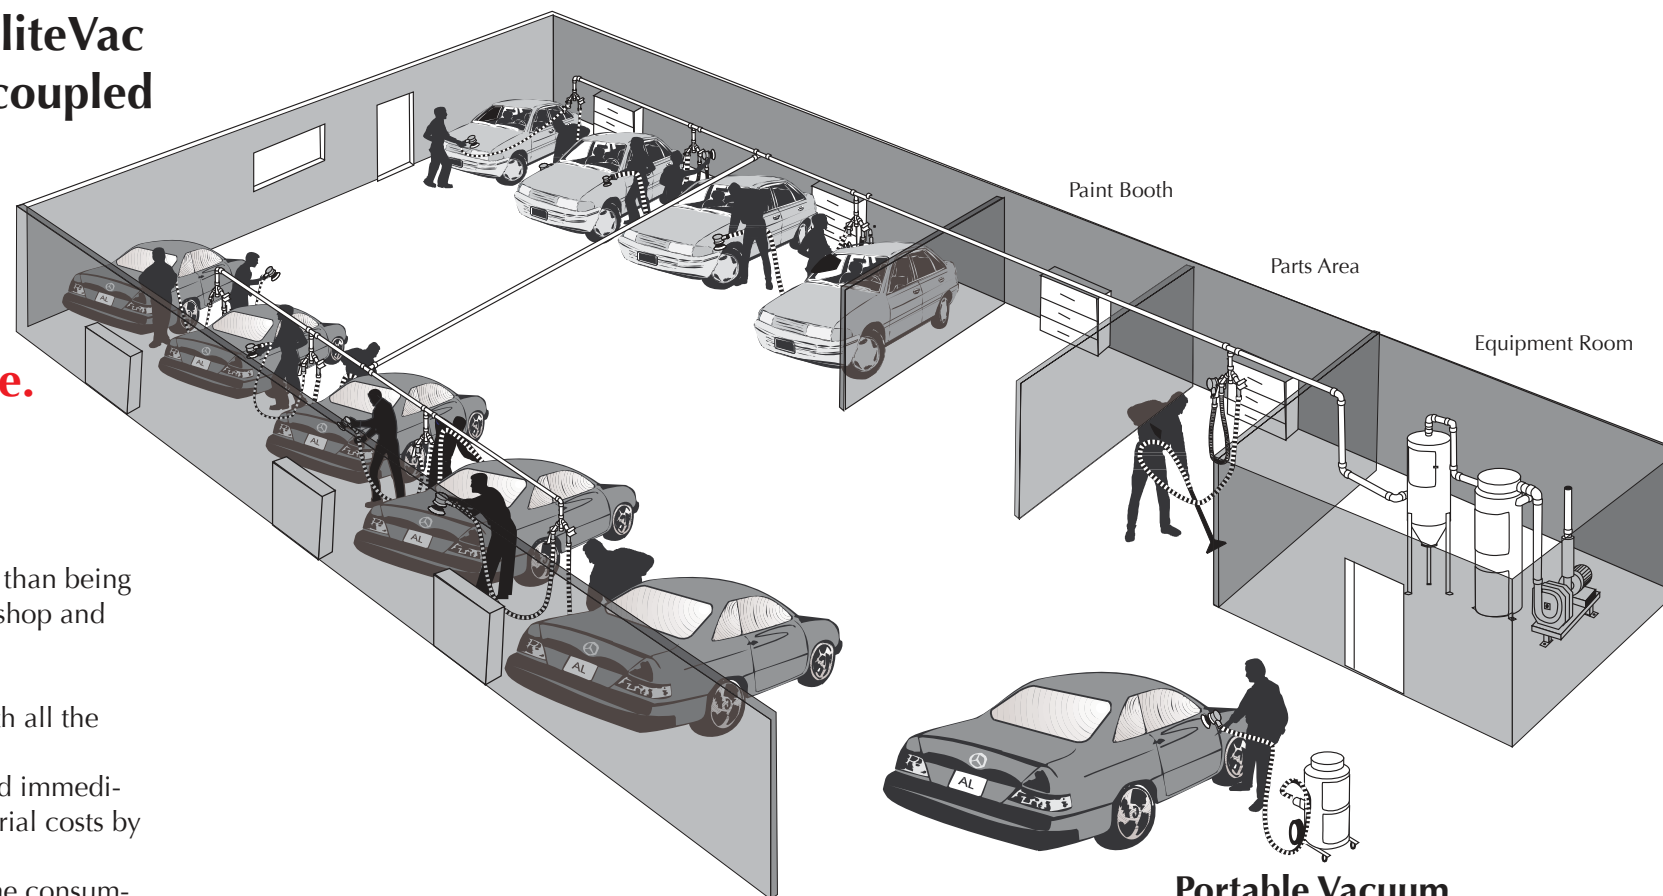

No technician wants to work in a dusty environment, once they have worked in a clean shop. It takes time and money to replace good body men. All the above leads to...

BETTER PAINT JOBS

With immediate removal of sanding dust, you can avoid a build up of grit on discs, and reduce the need for paint repairs. Which in turn causes...

MORE BUSINESS

People love their cars. Customers respond well to clean shops; they don't want to leave their car in a dusty shop. Be the clean shop at which people feel comfortable leaving their cars.

VFD (Variable Frequency Drive)

A VFD is an electronic control that regulates the necessary speed of the vacuum to accommodate the number of users on the system at any one time.

When few tools are in use the reduced speed of the vacuum, **drastically reduces energy consumption, reduces cost to operate and extends equipment life!**

For more information contact a Auto Vac Industrial professional.

The addition of a VFD is the single most cost saving purchase you can make.

Turbine Vacuum Producer with Large Pulse Jet Separator, 4 to 10 Users (Larger systems available contact factory)

ELITE VAC FEATURES

Pulse Jet Separators

- 25 years of proven design
- Made from heavy gauge steel and fabricated with continuous welded seams.
- Primary cyclonic separation with secondary filtered separation.
- Glazed polyester filter bags eliminate clogging. No tools needed for fast removal and replacement.
- Automatic air pulse bag cleaning to eliminate clogging and providing high suction at all times.
- Two year warranty on Separators for all parts and labor.

Centrifugal Exhausters

- Impeller shaft supported by two outboard industrial hi-speed bearings. Shaft and impellers balanced to meet or exceed industry standards.
- Turbine blower casing is housed between two 1/2" thick 356 alloy aluminum head castings for strength and durability. Inlet and outlet openings are directional controlled to accelerate inlet and outlet air.
- Extremely durable TEFC drive motor is cast iron. Aligned at the factory for vibration-free operation. Turbine blower section does not require disassembly to service motor. Single phase motors available. 18 month no-fault warranty on motor.
- Two year warranty on Centrifugal Exhausters for all parts and labor.
