

**POS 22.0**

# What's New!

**Field Testing**

- Opt Spot Integration - Text Marketing Service integration
- rTC with Digital Queue integration - Manage the tunnel queue of your rTC with Sonny's Digital Queue
- PayVacs - Payment Terminal for Central Vacuums

**IMPROVEMENTS AND FIXES****BACK OFFICE**

- Active Member Tracking: Added a QtyM column in the Recurring Tracking widget. The QtyM is the number of active members. This number may differ from the number of accounts because accounts can have multiple members. Therefore the QtyM column will always be the same or greater than the number of accounts.

**SONNY'S TUNNEL CONTROLLER**

- Added a Special Function Type for Roller Up. Clients with a Front Wheel Pull using Auto Roller Up now have the option to select a Manual Front and an Auto Rear. This option allows clients to use the Roller Up Push button for the front tires and the Tire Tape Switch for the rear tires. This features is available in STC v4.1.0+
