

POS 22.1

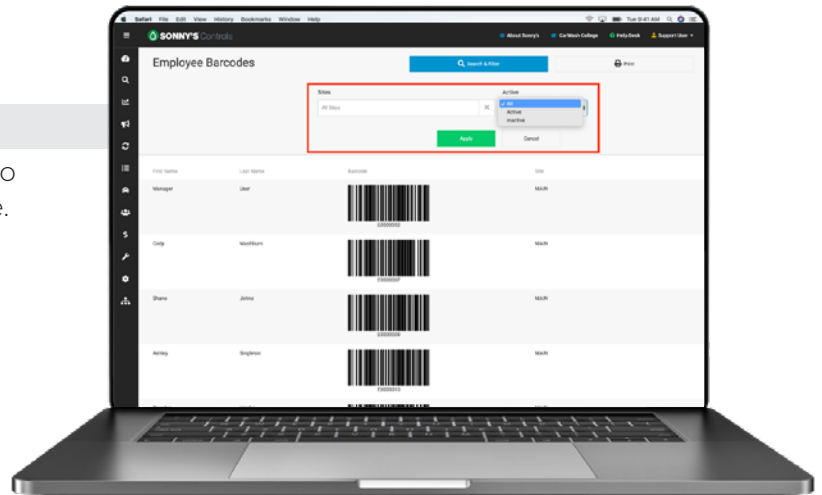

What's New!

Employee Barcode Page Improvements

PATH: Back Office > Employee > Employee Barcodes

A new 'Search & Filter' feature has been added to the Employee Barcodes page in the Back Office.

- Filter by Site:
 - Defaults to the main site
 - Allows multi-site selection
- Filter by employee Active status:
 - 'Active' vs. 'Inactive'
 - 'All' for employees assigned to work on Site(s) selected

Note: 'All Sites' (by leaving Site filter empty) and 'All' Active filter will result in same behavior as functionality prior to this release.

Enhancements \$0 Authorization

Sonny's Pay Station, POS and E-Commerce have been enhanced to support the following scenarios:

- If the account is on a 'Payment CC Update Declined' state with the next bill date in the *future*:
 - A \$0 authorization will be performed for clients with Worldpay payment gateway.
 - A 1 cent token charge will be performed for clients with other payment gateways.
- If the account is on a 'Payment CC Update Declined' state with the next bill date in the *past*:
 - A full amount charge will be processed.

IMPROVEMENTS AND FIXES

BACK OFFICE

- Removed the 'Recurring Churn Sale Site' from the Back Office navigation menu. However, this report still exists and will continue to work.
- Renamed the 'Recurring Churn Billing Site' to 'Recurring Churn' in the Back Office navigation menu.
- A slight adjustment was applied to the top and bottom copy of the reports status bar in Back Office during report load and retrieval.

POS

- Enhanced how License Plate Recognition redemptions are processed so that the POS does not display a Success dialogue box with a push "OK" button that the end user needs to press.
