

L4 VACUUM ARCH - *ideal for vacuum areas where maximizing budget is a priority.*

For complete specifications and dimensions please visit autovacinc.com

Study steel stanchions are 4" in diameter, arches are 2" in diameter — the design is structurally engineered to maximum durability.

Arch delivers hose to customer's door for convenient vacuuming — keeps hoses off the ground, minimizes wear and tear.

Primary separator captures debris before air enters piping manifold, minimizing clogs. Allows for easy recovery of mistakenly vacuumed items.

Piping from vacuum producer and between arches runs overhead.

System is modular, so you can add arches as business grows.

Engineered system design available.

L4 VACUUM ARCH

CUSTOMIZE YOUR ARCHES

1. Integrate LED or florescent lighting in your arches to extend operational hours.
2. Create the perfect combination of hoses and nozzles - crevice tools, claws, or express nozzles and corresponding holsters.
3. Select your primary separators in a solid color or two-tone for a truly custom look.
4. Complete your custom look with color matched Endura Coatings.

AutoVac's L4 Vacuum Arch series are ideal for vacuum areas where maximizing budget is a priority.

Whether you need one or 100 vacuum hoses, our AVI Vacuum Arch Series lets you create a support structure to meet your exact specifications.

Options include cyclonic primary separators for each arch, trash bins, mat holders and vacuum-on-demand metering devices.
